

UVIS

Under Vehicle Inspection System

Under Vehicle inspection System

The use of an Under Vehicle Inspection System (UVIS), also known as an Under Vehicle Surveillance System, is the best way to detect irregularities on the underside of a vehicle. Security personnel can perform high-quality - highly efficient access control and inspection. This is to detect explosives, weapons, narcotics or other contraband hidden under vehicles, without the use of a mirror. The displayed image provides a clear / comprehensive view and can serve as evidence.

The permanent system with a 'heavy-duty cover' provides robust under-vehicle inspection without additional supervision and can withstand the weight of large trucks. For mobile applications, there are lightweight aluminum ramps or sturdy rubber pads available, ideal for flexible security checks and rapid deployment. It offers crystal-clear, high-res color images, automatic detection of foreign objects, and optional extra features such as ANPR and cameras for enhanced control.

With Bavak, you are assured of the highest quality. Bavak has over 50 years of experience in high-security for critical infrastructure worldwide. This experience translates into extensive expertise used to select the best products. Contact Bavak for more information.

Bavak. Securing daily life

UVIS Permanent System

The permanent system with a 'heavy-duty cover' is designed for under-vehicle inspection without requiring additional guidance for the driver. Thanks to its robust construction, the system can even withstand the weight of large trucks. The entire system is made of stainless steel and can be installed in the road surface with minimal construction work. The ScanStation is available in a standalone housing or as a 19" rackmount installation.

UVIS Temporary System

The mobile SecuScan® under-vehicle inspection system is perfect for rentals, events, pilots, and demos. The system is easy to install, with a choice of lightweight aluminum ramps or sturdy rubber pads. The rubber pads can be semi-permanently attached, while the aluminum ramps are ideal for quick deployment. Suitable for all vehicle weight classes and track widths, it offers fast assembly, disassembly, and easy transport for flexible security checks at various locations.

Full Color & Detection

The UVIS provides an advanced system that delivers crystal-clear, full-color images of the entire underside of scanned vehicles, including sills and running boards, in high resolution. This allows for zooming in on details during the inspection. Thanks to automatic detection, the system identifies foreign objects or changes to the chassis and marks them. This technology is essential for ensuring the highest security standards at every access control point.

Extra Optics

The UVIS can be enhanced with additional features such as integrated ANPR for license plate recognition. There's also the Driver Camera, which captures clear images of the driver. Additionally, the Scene Camera provides a view of the vehicle's roof, allowing for the detection of any contraband or unauthorized persons on top of the vehicle.
